No Food Waste — Food Rescue & Redistribution Platform

Mission & Organization Overview

Organization: No Food Waste (www.nofoodwaste.org)

No Food Waste is a non-profit organization dedicated to bridging the gap between food surplus and hunger. Its mission is to recover excess, untouched, and hygienic food from weddings, restaurants, and institutions and redistribute it to people in need. No Food Waste aims to create a world with zero hunger and minimal food waste, aligning its efforts with global sustainability goals of Zero Hunger and responsible consumption.

Context & Problem Statement

India faces a dual crisis: millions of people go hungry daily, while over 68 million tons of food is wasted annually. No Food Waste is dedicated to bridging this gap by collecting and distributing surplus food across locations in India, including Chennai, Coimbatore, and Hyderabad. Operations involve a 12-member team, dedicated kitchens, volunteers, and vehicles.

Excess food requests arrive manually through helpline numbers, causing resource constraints and high rejection rates during peak periods. Coordination currently depends on spreadsheets and WhatsApp groups. Smaller quantities are frequently rejected, and distribution during the critical "golden hour" is severely bottlenecked.

Strategic Objectives & Future Platform

- Develop a comprehensive, technology-driven platform to optimize operations and manage food donation requests, volunteer availability, and logistics in real time.
- Minimize resource constraints and reduce rejected requests by aggregating small-batch food collections.
- Automate data collection and communication to eliminate spreadsheet/WhatsApp overhead.
- Map hunger hotspots using geospatial density calculations to guide rapid distribution within the golden hour.
- Establish volunteer onboarding, verification, training, and certification pathways.
